                                                                                                                              Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                     Published Applications AA:*

                                                                                                                                                                                                                      This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunosublatory, antirheumatic and antiAIDs activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to dispuse disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     BLys; B lymphocyte stimulator; TNF superfamily; human; cytostatic; tumour necrosis factor; B cell proliferation; B cell differentiation; immunosuppressive; immunostimulant; immunomodulatory; antirheumatic; antiAIDS; vaccine; cancer; immune; autoimmune disorder; immunodeficiency; systemic lupus erythematosus; rheumatoid arthritis; CVID; AIDS; common variable immunodeficiency; acquired immunodeficiency syndrome.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                19-AUG-2002
                                                                                                                                                                                                                                                                                                                                                                                    cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to antirheumatic and antiAIDS activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be associated with aberrant diseases associated with aberrant BLyS expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have

                                                                                                                                                                        This invention describes novel antibodies that immunospecifically bind to CC B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the Ct tumour necrosis factor (TMP) super family and induces B cell CC proliferation and differentiation. The antibodies of the invention have CY cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS in biological samples and may be used in this way to diagnose disease CC associated with aberrant expression of BLyS. They may also be associated with aberrant expression of BLyS. They may also be communicated to treat disease associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and cdiseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (e.g. common variable immunodeficiency (CTD) and acquired immunodeficiency syndrome (ALDS)). ABP43990-ABP47228 represent the antibodies and fragments of the antibodies described in the method confidence of the antibodies and fragments of the antibodies described in the method confidence.

                                                                                                                                                                                                                              This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the CC tumour necrosis factor (TNP) super family and induces B cell tumour necrosis factor (TNP) super family and induces B cell cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to confishibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease cadministered to treat disease associated with aberrant expression of BLyS. They may also be administered to treat disease associated with aberrant BLyS expression condictivity such as cancer, immune, and autoimmune disorders and condictivity such as cancer, immune, and autoimmune disorders and condictivity such as cancer, immune, and autoimmune disorders and condictivity such as cancer, immune, and autoimmune disorders and condictivity such as cancer, immune, and autoimmune disorders and condictivity such as cancer, immune, and autoimmune disorders and condictivity such as cancer, immune, and autoimmune disorders and condictivity such as cancer, immune, and autoimmune disorders and condictivity such as cancer, immune, and autoimmune disorders and condictivity such as cancer, immune, and autoimmune disorders and condictivity such as cancer, immune, and autoimmune disorders and condictivity such as cancer, immune, and autoimmune disorders and condictivity such as cancer, immune, and autoimmune disorders and condictivity such as cancer, immune, and autoimmune disorders and condictivity such as cancer, immune, and autoimmune disorders and condictivity such as cancer, immune, and autoimmune disorders and condictivity such as cancer, immune, and autoimmune disorders and condictivity such as cancer, immune, and autoimmune disorders and condictivity such as cancer, immune, and autoimmune disorders and condictivity su

                                                                                                                                                                                                                                                                                                                                    This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant sepression of BLyS. They may also be administered to treat diseases associated with aberrant sepression of BLyS. They may also be a speciated with aberrant expression and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and activity such as cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            BLys; B lymphocyte stimulator; TNF superfamily; human; cytostatic; tumour necrosis factor; B cell proliferation; B cell differentiation; immunosuppressive; immunostimulant; immunomodulatory; antirheumatic; antiAlDS; vaccine; cancer; immune; autoimmune disorder; immunodeficiency; systemic lupus erythematosus; rheumatoid arthritis; CVID; AIDS; common variable immunodeficiency; acquired immunodeficiency syndrome.

The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in the indicated with aberrant expression of BLyS. They may also be associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression cand activity such as cancer, immune, and autoimmune disorders and cardinated with aberrant account of the antipoliciancy (CVID) and cardinated immunodeficiency (e.g. common variable immunodeficiency (CVID) and cardinated and fine and fine arthritis, the antipoliciance (AIDS)). ABP43990-ABP47228 represent the antipolician and fine antipolician anti

                                                                                                                                                                                                                                                                                                                                   proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant Expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (e.g. common variable immunodeficiency (CVID) and acquired immunodeficiency syndrome (AIDS)). ABP43990-ABP47228 represent the antibodies and fragments of the antibodies described in the method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      16-JUN-2000; 2000US-212210P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 2; Page 3042; 3148pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antibodies against B Lymphocyte Stimulating polypeptides, useful for the diagnosis and treatment of cancers and immune disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human BLyS binding scFv VH CDR3 SEQ ID 2743

                                                                                                                                                                                                                                                                                      CC B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the CC tumour necrosis factor (TNF) super family and induces B cell corpoliferation and differentiation. The antibodies of the invention have CC proliferation and differentiation. The antibodies of the invention have CC entirheumatic and antiAIDS activity and can be used in vaccines to CC antirheumatic and antiAIDS activity and can be used in vaccines to CC conhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in CC conjugated samples and may be used in this way to diagnose disease CC associated with aberrant expression of BLyS. They may also be conditionable of treat diseases associated with aberrant BLyS expression CC administered to treat diseases associated with aberrant BLyS expression CC and activity such as cancer, immune, and autoimmune disorders and CC immunodeficiency (e.g. common variable immunodeficiency (CVID) and CC continuous continuous common variable immunodeficiency (CVID) and CC continuous continuous common variable immunodeficiency (CVID) and CC continuous

                                                                                                                                                                                                                                                      This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the CC tumour necrosis factor (TNF) super family and induces B cell tumour necrosis factor (TNF) super family and induces B cell collection and differentiation. The antibodies of the invention have CC antirheumatic and antiAIDS activity and can be used in vaccines to cinhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in CC biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered with aberrant expression of BLyS. They may also be administered with aberrant expression of BLyS. They may also be cadministered with aberrant expression of BLyS. They may also be cadministered with aberrant expression of BLyS. They may also be compared with aberrant BLyS expression conditions activity such as cancer, immune, and autoimmune disorders and conditional condections (c) and activity such as cancer, immune, and autoimmune disorders and conditional condections (c) as yet may also be approached with aberrant BLyS expression conditional condections (c) and activity such as cancer, immune, and autoimmune disorders and conditional condections (c) and activity such as cancer, immune, and autoimmune disorders and conditional condections (c) and activity such as cancer, immune, and autoimmune disorders and conditional condections (c) and activity such as cancer, immune, and autoimmune disorders and conditional conditions and fragments of the antibodies described in the method confidency (c) and condection of the antibodies described in the method confidency and fragments of the antibodies described in the method confidency (c) and conditional conditions and fragments of the antibodies described in the method confidency (c) and c) and c) and c) are considered with aberrant and c)

                                                                                                                                                                                            This invention describes novel antibodies that immunospecifically bind to CC B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the CC tumour necrosis factor (TNF) super family and induces B cell tumour necrosis factor (TNF) super family and induces B cell continuous and differentiation. The antibodies of the invention have CC cytostatic, immunosuppressive, immunostimulant, immunomodulatory, CC cytostatic and antiAIDS activity and can be used in vaccines to CC inhibit the expression and activity of BLyS. The antibodies bind to BLyS in CC and so may be used to detect and quantitate the presence of BLyS in CC biological samples and may be used in this way to diagnose disease CC administered to treat disease associated with aberrant ELyS expression ad activity such as cancer, immune, and autoimmune disorders and CC diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, C immunodeficiency (e.g. common variable immunodeficiency (CVID) and CC define antibodies and fragments of the antibodies described in the method CC of the antibodies and fragments of the antibodies described in the method

CC AAH19170-AAH19250 represent cDNAs corresponding to 27 human secreted CC protein genes, and AAG62156-AAG62235 represent the proteins they encode. CC AAG62236-AAG62233 represent human secreted protein fragments. The genes CC and their corresponding secreted proteins are useful for preventing. CC treating or ameliorating medical conditions, e.g., by protein or gene CC amount of the new genes. Specific uses are described for each of the CC amount of the new genes. Specific uses are described for each of the CC 22 genes, based on the tissues in which they are most highly expressed, CC and include developing products for the diagnosis or treatment of CC proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, CC AIDS, autoimmune diseases (e.g., Alzheimer's disease, CC allergies, neurological disorders (e.g., Alzheimer's disease, CC parkinsons's diseases (e.g., porilasis), sepsis, disbetes, atherosclerosis, CC gastrointestinal disorders, pregnancy-related disorders, endocrine CC disorders, and infections. The proteins can also be used to aid wound CC sunburn, to maintain organs before transplantation, for supporting cell CC cognate ligands or binding partners, and in chemetaxis, and can be used CC antibodies specific for a protein of the invention can be used in claimanoassave to immunoassave e.g., radioimmunoassave mentioned above, and CC in diagnostic immunoassave e.g., radioimmunoassave mentioned above, and CC in diagnostic immunoassave e.g., radioimmunoassave mentioned above, and CC in diagnostic immunoassave e.g., radioimmunoassave representations of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and conditions and conditions and conditions and can be used to make the conditions and can be used and conditions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            S
                                                 This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNP) super family and induces B cell tumour necrosis factor (TNP) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAlDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (e.g. common variable immunodeficiency (CVLD) and acquired immunodeficiency syndrome (AIDS)). ABP43990-ABP47228 represent the antibodies and fragments of the antibodies described in the method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     BLys; B lymphocyte stimulator; TNF superfamily; human; cytostatic; tumour necrosis factor; B cell proliferation; B cell differentiation; immunosuppressive; immunostimulant; immunomodulatory; antirheumatic;

presence of inhibitory antibodies directed against factor VIII. The polypeptides of the invention and the antibodies generated from them are useful in compositions for neutralizing factor VIII inhibiting antibodies in hemophilia A patients. This sequence represents the human anti-factor VIII antibody VH IT-2 protein CDR3 fragment which is used in the method of the invention.

                        This invention describes a novel polynucleotide (I) (and complements and hybridizable polynucleotides) comprising a contiguous nucleotide sequence coding for a human antibody with factor VIII specificity which has hemostatic activity. (I) is useful a primer or probe for detecting the presence of inhibitory antibodies directed against factor VIII. The polypeptides of the invention and the antibodies generated from them are useful in compositions for neutralizing factor VIII inhibiting antibodies in hemophilla A patients. This sequence represents the human anti-factor VIII antibody clone IT-2 protein which is used in the method of the invention.
                                                                                                                                                                                                       New polynucleotide, polypeptide and antibody useful for diagnosing presence of neutralizing antibodies against factor VIII and for treatment of hemophilia A patients with these antibodies -
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human anti-factor VIII antibody VH clone IT-2 encoded protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAY50950

                                                                                                                                                                                                                                                                                                           hybridizable polynucleotides) comprising a contiguous nucleotide sequence coding for a human antibody with factor VIII specificity which has hemostatic activity. (I) is useful a primer or probe for detecting the presence of inhibitory antibodies directed against factor VIII. The polypeptides of the invention and the antibodies generated from them polypeptides of the invention and the antibodies generated from them are useful in compositions for neutralizing factor VIII inhibiting antibodies in hemophilia A patients. This sequence represents the human anti-factor VIII antibody VH IT-2 protein which is used in the method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New polymucleotide, polypeptide and antibody useful for diagnosing presence of neutralizing antibodies against factor VIII and for treatment of hemophilia A patients with these antibodies -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Voorberg JJ,

"Amino acid sequence of the Fv region of a human monoclonal IgM
(protein WEA) with antibody activity against 3,4-pyruvylated
galactose in Klebsiella polysaccharides K30 and K33.";

Proc. Natl. Acad. Sci. U.S.A. 80:4837-4841(1983).

-I- MISCELLANEOUS: THIS CHAIN WAS OBTAINED FROM A MONOCLONAL ANTIBODY
AGAINST 3,4-PYRUVYLAYED GALACTOSE AND ISOLATED FROM A PATIENT WITH
WALDENSTROM'S MACROGLOBULINEMIA.
-I- SIMILARITY: Contains 1 immunoglobulin-like domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MOD_RES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pfam; PF00047; ig; 1.
